

DENTURES

Implant supported dentures are used to help replace most or all of your teeth. Implant dentures are supported by and attached to dental implants. We offer full and partial dentures.

Benefits:

- More Comfortable
- More Stable
- Enhanced Chewing Ability
- More Natural
- No Movement
- No Sore Spots
- Encourages Bone Growth

What to Expect:

Step 1: Come in for an exam & consultation.

Step 2: We will place your dental implants.

Step 3: Once healed, you will come in for a second round where we will expose the dental implants and place a cap over your gums for healing.

Step 4: We will then place the abutments, and take an impression of your mouth.

Step 5: We will then permanently secure your denture framework to your implants.

Why Should I Get Implant Supported Dentures?

If you wear dentures, they can slip and cause sore spots on your gums. Additionally, denture wearers need to be aware that plaque can build-up, irritating the underlying tissue, which causes the gums to recede. Because the shape of your mouth continually changes, dentures also need to be checked regularly for fit. Call and get Implant Supported Dentures Today!
